

MassGIS Position Announcements
Regional GIS Field Technicians (full-time contract position)
Start date: mid-September 2017
Application Deadline: August 17, 2017

Background

MassGIS is presently maintaining and continuing to develop the statewide GIS mapping and data needed to support the Next Generation 9-1-1 (NG911) emergency response system. Some address location mapping can only be completed correctly by people working in the field.

MassGIS seeks two regional GIS Field Technicians. The first Technician will work in and must live North of Boston and not further west than Interstate 495. The second Technician will work in Berkshire County and must, while doing this work, live in Central Berkshire County. Applicants for this position must have their own reliable car that can be used to conduct the field work duties described below. The hourly rate is \$30; however, the fee (typically about 14%) for the state's contracting company and job-related automobile expenses are included in that rate. As needed and appropriate, you will also be expected to use your own cell phone to call your MassGIS supervisor.

Duties

The work is almost exclusively full-time in the field. In addition to the interview, and if you are hired for this position, at the beginning of the contract period you will be required to travel into Boston to MassGIS' office for a (paid) day of orientation and training; a second similar trip may be required at some other time. There will also be training in the field.

The field work consists of using a browser-based custom-built application on a tablet computer provided by MassGIS to: 1) find the correct location of addresses not assigned to a structure and/or point location and, 2) add new, or link existing, addresses to structure points that lack an address. The primary focus of the work will be "sites" with multiple buildings (e.g., condominium complexes, office parks, academic campuses, and industrial parks). Work will be conducted one municipality at-a-time. Structure points without addresses and addresses not assigned to a structure point will be downloaded to the tablet application via MassGIS' web services for the community in which you are working. The application will also display completed address points. Some portion of the work, although not necessarily the majority, will need to be completed on foot even in cold weather. Interaction with the tablet surface is via a stylus, so gloves can be worn while using the tablet. The tablet has a hand strap. When it's raining or snowing, work may be limited to what can be accomplished from inside a car. While some of this work can be accomplished at home using information available on-line, if the

weather is too severe for safe driving then it's possible the number of hours you can work will be limited. Interaction with municipal officials, including local law enforcement and municipal staff, will be a routine part of the work.

Preferred qualifications

- Bachelor's degree in geography, planning, environmental science, or similar field
- At least two college classes (semester-long or equivalent) in GIS
- Demonstrable ability to follow direction and to work independently, methodically, and efficiently
- Good verbal communication skills

Ideal Background

- 10 or more weeks of full-time work experience using ArcGIS or an equivalent GIS
- Substantive experience with GIS-related data collection in the field

Knowledge Acquired on the Job

Experience using tablet computers for field work

Experience with the complexities and issues of address data and address assignment

Familiarity with the MassGIS master address data model

Application Instructions:

Send a file (in PDF format) with your combined cover letter and resume (using the file naming convention *lastname_firstname*; e.g. nutting_paul.pdf) to Paul Nutting at paul.nutting@mass.gov
